As part of its ongoing digital transformation, the National Center for Meteorology (NCM) offers **Anwaa**, an advanced mobile application designed to provide easy and real-time access to weather data and atmospheric conditions—empowering individuals, communities, and stakeholders with up-to-date, around-the-clock insights.

Anwaa reflects NCM's commitment to adopting smart technologies and enhancing service delivery. The app delivers detailed, regularly updated information on temperature, wind activity, rainfall forecasts, and real-time alerts for weather phenomena—all through a user-friendly, fully integrated interface.

To ensure accessibility and inclusivity, **Anwaa** supports content in **9 languages**, catering to citizens, residents, and visitors alike, while contributing to heightened public awareness and improved community safety.

Powered by **artificial intelligence and interactive mapping**, the app offers location-based notifications, allowing users to receive timely, relevant alerts based on their geographic area—making it a powerful tool for preparedness and decision-making.

Anwaa is a key part of NCM's broader efforts to enhance and expand digital meteorological services in line with the goals of **Saudi Vision 2030** to advance smart government services.

The application is available for download on both the **Apple Store** and **Google Play**, providing advanced features to help users stay informed about weather conditions and their potential impacts.
